dv01

Manager, Data Ingestion

Multiple Locations, United States

Dear dv01 Hiring team,

A pleasure to connect.

Am glad to say my years of work/school/certificate experience satisfies all minimum requirements. This includes scholastic projects involving various tools for big data analytics, certificate Data Engineer with Python, managing and contributing to Data Engineer (DE) ETL Infrastructure creation, Data Science Infinity Certificate, Project Engineering initiatives, Hispanic Leadership contributions and two Six Sigma Green belt projects for data driven Statistical Process Control (SPC) part of the Define, Measure, Analyze, Improve & Control (DMAIC) system.

My experience includes managing a team of 6+ Data/Software engineers on ETL Infrastructure creation for AI and ML downstream feed, start to end infrastructure creation (AWS, Terraform, Jenkins, Pyspark, Python, Snowflake, Qlicksense, etc..). At times our team also governs data science and/or ML projects along with respective downstream teams to educate the DE's on the decision making process with upstream infrastructure. Such leadership ideas stem from myself taking initiatives like being part of and lead brand-new program E2M (seen in resume) to develop business understanding. I consider myself both a manager and an individual contributor, due to wanting to lead by example and ask for leadership roles to be as such. My ongoing push to broadly understand the overall objectives assist me with managing teams. Leading in this position to which applying for, will be fluid.

Furthermore, I consider myself a lifelong student and am always seeking more education to learn, apply & develop. For example, I've taken coding certificate programs & 6 months after receiving my MBA in Business Analytics I went back to obtain Comp. Sci. Data Sci. & Cloud Computing with John Hopkins.

Side note, I am the type of person to improve my life and took time to both create "split the check" IOS excel to create ease of venmoing to friends and also created my own portfolio website (a passion project of mine).

I look forward to learning more about the organization. Thanks in advance for the time reading through.

With all respect,

Emanuel Calderon
